Manuscript Type: CASE REPORT

Adolescent Lisfranc injury treated with TightRope™ : A case report and review of literature

Themistoklis Tzatzairis, Gregory Firth, Lee Parker

Abstract

Background

Lisfranc injuries are rare and can be easily missed. This injury is extremely rare in children, with limited published data. Different treatment options have been described; one of the options in adults is the “mini” TightRope™ Syndesmosis

There are no matching sources for this report.
