### [PDF] The Epidemiology and National Trends of Bearing ...

<https://ecios.org/Synapse/Data/PDFData/0157CIOS/cios-8-29.pdf>

Background: We analyzed the data for primary total hip arthroplasty (THA) in the Korean nationwide database to assess (1) the epidemiology and national trends of bearing surface usage in THAs and (2) the prevalence of each type of bearing surface according to age, gender, hospital type, primary payer, and hospital procedure volume.

### Operative Trends in the Treatment of Hip Fractures and the ...

<https://journals.sagepub.com/doi/full/10.1177/2151459318760634>

Introduction: There is a projected exponential increase in the number of hip fractures in the United States. Trends in patient demographics and the role of total hip arthroplasty (THA) and its associated outcomes following hip fractures surgery have not been well studied. Methods: Patients with proximal femur fractures between 1990 and 2007 were identified in the National Hospital Discharge Survey ...

## National trends in total hip arthroplasty for traumatic hip fractures: An analysis of a nationwide all-payer database

Anthony J Boniello, Alexander M Lieber, Kevin Denehy, Priscilla Cavanaugh, Yehuda E Kerbel, Andrew Star

### Abstract

#### BACKGROUND

Hemiarthroplasty (HA) has traditionally been the treatment of choice for elderly patients with displaced femoral neck fractures. Ideal treatment for younger, ambulatory patients is not as clear. Total hip arthroplasty (THA) has been increasingly utilized in this population however the factors associated with undergoing HA or THA have not been fully elucidated.

#### AIM

To examine what patient characteristics are associated with undergoing THA or HA. To determine if outcomes differ between the groups.

#### METHODS

We queried the Nationwide Inpatient Sample (NIS) for patients that underwent HA or THA for a femoral neck fracture between 2005 and 2014. The NIS comprises a large representative sample of inpatient hospitalizations in the United States. International Classification of Diseases, Ninth Edition, ICD-9-CM code 81.01 was used to identify patients
