Retrospective Study

Improvements after modified **Quad and triangle tilt** revision surgical procedures in obstetric brachial plexus palsy.

Rahul K. Nath, Chandra Somasundaram.**Abstract:****Purpose:**

Comparing outcomes of our revision surgical operations in obstetric brachial plexus palsy (OBPP) patients to results of conventional operative procedures at other institutions.

Patients and Methods:

We analyzed our OBPP data and identified 10 female and 10 male children aged 2.0 to 11.8 years (average age 6.5 years), who had prior conventional surgical therapies at other clinics. Of the 20 patients, 18 undergone triangle tilt, 2 had only mod Quad. Among 18 patients, 8 had only triangle tilt and 10 had also mod Quad as revision surgeries with us. We analyzed the
