11 **Abstract**

12 **AIM:** The purpose of the study was to evaluate social media usage of orthopaedic

13 patients to search for solutions to their health problems.

14 **METHODS:** The study data were collected using face-to-face questionnaire with

15 randomly selected 1890 patients aged over 18 years who had been admitted to the

16 orthopaedic clinics in different cities and provinces across Turkey. The questionnaire

17 consists of a total of 16 questions pertaining to internet and social media usage and

18 demographics of patients, patients' choice of institution for treatment, patient

19 complaints on admission, online hospital and physician ratings, communication

20 between the patient and the physician and its effects.

21 **RESULTS:** It was found that 34.2% (n=647) of the participants consulted with an
