Chest pain caused by multiple exostoses of the ribs: A case report and a review of literature

Daniele Mazza, Mattia Fabbri, Cosma Calderaro, Carlo Iorio, Luca Labianca, Camilla Poggi, Francesco Turturro, Antonello Montanaro, Andrea Ferretti

Abstract

The aim of this paper is to report an exceptional case of multiple internal exostoses of the ribs in a young patient affected by Multiple Hereditary Exostoses (MHE) coming to our observation for chest pain as the only symptom of an intra-thoracic localization. A 16 years old patient with familiar history of MHE came to our observation complaining a left-sided chest pain. This pain had increased in the last months with no correlation to a traumatic
