10 **Abstract:**

11 The purpose of this study was to determine whether an adductor canal nerve block  
12 (ACB) reduces patient falls when compared to a femoral nerve block in conjunction  
13 with a knee immobilizer (FNB + KI) after total knee arthroplasty (TKA). We conducted  
14 an institutional review of all-cause falls after TKA from January 2013 to August 2016  
15 using a quality improvement database (Be-safe). 834 patients had TKA with FNB + KI.  
16 Of those patients, 11(1.3%) experienced a fall during their hospital stay. In contrast, 791  
17 patients had TKA with ACB. Only one (0.13%) fall was recorded within this group. The  
18 difference between the two groups achieves statistical significance ( $P = 0.006$ ). Given the
