SIMILAR**Name of Journal:** *World Journal of Anesthesiology***ESPS Manuscript NO:** 22750**Manuscript Type:** LETTERS TO THE EDITOR**Improvised technique for measuring tracheal tube cuff pressure****René Agustín Flores-Franco****Abstract**

We agree with the editorial published by Feng *et al.* concerning the insufficient routine monitoring of tracheal tube cuff pressure by anesthesiologists, and propose an improvised technique that can facilitate and promote such routine monitoring by intensive care staff who attend to patients receiving mechanical ventilation. Insufficient monitoring of tracheal cuff pressure has also been documented for ICU nurses. Measurements of cuff pressure are beneficial when used in management of air leakage around an endotracheal tube, and can be easily obtained with the aid of a personalized and simple technique performed using materials that are readily available in all hospitals. Other investigators have previously demonstrated the usefulness of employing an improvised technique. We considered that possible disadvantages are similar to those encountered when using standardized equipment. With our improvised technique, we seek to promote among the nursing staff the determination of the tracheal tube cuff pressure in intubated
