Hypnosis for burn-related pain: Case studies and a review of the literature

R Lynae Roberts, Zoltan Kekecs, Laurie Lazott, Omair H Toor, Gary R Elkins

Abstract

Burn injuries create severe pain and psychological distress that are highly variable between patients. Distinct types of pain during various stages of injury and recovery make treatment complex. Standard pharmacological treatment of pain can have adverse effects and is not effective in treating anxiety and other psychological issues. Researchers have proposed that integrating clinical hypnosis as a complementary
