Thrombolysis for mild stroke

Hai-Chao Ji, Le-Tian Yang, Fu-Ling Yan

Abstract

The term "mild stroke", or "minor stroke" refers to the acute ischemic ³⁴stroke patients with mild and nondisabling symptoms. Currently there ³⁸is still no unanimous consensus on the exact definition of mild stroke. Patients with mild stroke are assumed to have a good prognosis in natural course, so they are routinely not given thrombolysis despite early emergency department arrival. Recent studies have revealed that, however, approximately one third ³of so-called mild stroke patients who are not treated with thrombolysis have
