Time windows for postnatal changes in morphology and membrane excitability of genioglossal and oculomotor motoneurons

Livia Carrascal, JoséLuis Nieto-González, Ricardo Pardillo-Díaz, Rosario Pásaro, German Barrionuevo, Blas Torres, William E Cameron, Pedro Núñez-Abades

Abstract

Time windows for postnatal changes in morphology and membrane excitability of genioglossal (GG) and oculomotor (OCM) motoneurons (MNs) are yet to be fully described. Analysis of data on brain slices *in vitro* of the 2 populations of MNs point to a well-defined developmental program that progresses with
