Pharmacologic vitreolysis: New strategy for treatment of anomalous vitreo-macular adhesion

Desislava N Koleva-Georgieva

Abstract

Persistent anomalous vitreo-macular adhesion (VMA) is a well-known factor, associated with a variety of sight threatening diseases - including macular hole, vitreo-macular traction syndrome, cystoid and diabetic macular edema, exudative age- related macular degeneration, myopic traction maculopathy and others. With the advent of optical coherence tomography (OCT) our understanding of these pathologies and the ability of
