Unresectable stage III non-small-cell lung cancer: have we made any progress?

Carolien De Tollenaere, Yolande Lievens, Katrien Vandecasteele, Karim Vermaelen,
Veerle Surmont

Abstract

Lung cancer is responsible for the most cancer deaths worldwide with an incidence that is still rising. One third of patients have unresectable stage IIIA or stage IIIB disease. The standard of care for locally advanced disease in patients with good performance status consists of combined modality therapy in particular concurrent chemoradiotherapy. But despite a lot of efforts done in the past, local control and
