**Current methods of staging and restaging of the mediastinal nodes in non-small-cell lung cancer**

Marcin Zielinski

**Abstract**

To analyze the current methods of primary staging and repeated staging (restaging) of the mediastinal nodes in non-small-cell lung cancer (NSCLC), all methods currently used for staging of NSCLC are analyzed. These methods include imaging techniques (Computer Tomography (CT), Positron Emission Tomography (PET) combined with CT (PET/CT), endoscopic/ultrasound techniques (Endobronchial Ultrasound/Transbronchial Needle Aspiration (EBUS/TBNA) and Endoscopic Ultrasound/Fine Needle Aspiration (EUS/FNA) and surgical techniques (standard cervical mediastinoscopy (CM), video-assisted mediastinoscopy (VAM), extended
