Myasthenia grav is as a form of clinical presentation of thymic carcinoma

Joana Espiga de Macedo, Sílvia Lopes, Sofia Oliveira, João Cunha, Ana Luísa Faria, Sónia Rego, Albino Oliveira, Luís Krug, Emílio Macias Bravo

Abstract

Thymic carcinomas are a rare carcinoma of the thymus arising in the thymic epithelium. They represent less than 1 % of thymic malignancies. They often present with an advanced disease and metastasize to regional lymph nodes and distant sites. They have a worse prognosis with a 5-year survival rate of 30-50%, while thymomas are much less invasive and have a 5-year survival of
