 Asthma-chronic obstructive pulmonary disease overlap syndrome: A diagnostic puzzle for the clinicians

Ourania Koltsida, Antonia Koutsoukou, Nikolaos G Koulouris, Nikoletta Rovina

#### Abstract

Although asthma and COPD are distinct airway diseases characterized by chronic inflammation, in some cases distinguishing between them is puzzling. For example, chronic smoking leads asthmatic inflammation to a differentiated pattern resembling the COPD inflammation, and in some cases to fixed obstruction as in COPD, and on the other hand, few COPD patients may present with airway reversibility. ACOS is the condition sharing features encountered both in asthma and COPD. ACOS represents a diagnostic challenge in the clinical practice, since there is lack of specific indicators to distinguish it from asthma or
