Concepts and challenges of alveolar ridge preservation

Etiene de Andrade Munhoz, Camila Lopes Cardoso, Augusto Bodanezi,
Marina Barbosa Mello, Renato Yassutaka Faria Yaedu, Osny Ferreira Junior

Abstract

The loss of the post-extraction alveolar ridge vertical and horizontal volume constitutes an irreversible process and presents a considerable impact on the prosthetic rehabilitation, particularly when implant-supported. Therefore, alveolar ridge resorption has become a challenge on contemporary clinical dentistry and alveolar ridge preservation is an interesting therapeutic approach. The employment of biomaterials as a therapeutic alternative to
