Retrospective Study

Coeliac Disease in Children in Christchurch, New Zealand: presentation and patterns from 2000-2010

Adeline Kho, Martin Whitehead, Andrew Day

Abstract

AIM: To evaluate the presentation patterns of a cohort of children diagnosed with Coeliac disease at Christchurch Hospital, New Zealand.

METHODS: Children aged 16 years or less diagnosed with Coeliac Disease at Christchurch Hospital, Christchurch, New Zealand, over the 11 year period between 2000 and 2010 were identified retrospectively. Diagnosis of Coeliac disease was based upon standard histological criteria of endoscopically-obtained duodenal biopsies. Overlapping search methods were used to identify all relevant diagnoses within the time period. Endoscopy reports and histology findings were reviewed to confirm diagnosis. The numbers of diagnoses per year were calculated and changes in annual
