*Retrospective Study*

Analysis of the therapeutic evolution in the management of airway infantile hemangioma

Grecia V Vivas-Colmenares, Israel Fernandez-Pineda, Juan Carlos Lopez-Gutierrez, Miguel Angel Fernandez-Hurtado, Maria Antonia Garcia-Casillas, Jose Antonio Matute de Cardenas

## Abstract

AIM: To analyze the evolution in the management of airway infantile hemangioma (AIH) and to report the results from 3 pediatric tertiary care institutions.

METHODS: A retrospective study of patients with diagnosis of AIH and treated in 3 pediatric tertiary care institutions from 1996 to 2014 was performed.

RESULTS: Twenty-three patients with diagnosis of AIH were identified. Mean age at diagnosis was 6 mo (range, 1-27). Single therapy was indicated in 16 patients and 7 patients received combined therapy. Two therapeutic groups were identified: Group A included 14 patients who were treated with steroids, interferon, laser therapy and /or
