Value of preoperative MRI for prostate cancer staging and continence outcomes prior to prostatectomy: A review of the literature

Eric D Andresen, James A Brown, Kenneth G Nepple

Abstract

Pelvic imaging in newly diagnosed prostate cancer is primarily used for staging prior to definitive treatment. Over the past decade use of MRI for pre-surgical planning has increased, as well has he technology and methods for performing prostate MRI. To investigate and define the different MRI technologies available and further assess MRI
