Abstract

AIM: To study the early postoperative ICU management and complications in the first 2 weeks of Patients undergoing Cytoreductive Surgery (CRS) and Hyperthermic Intraperitoneal Chemotherapy (HIPEC).

METHODS: Our study is a retrospective, observational study performed at Icahn School of Medicine at Mount Sinai, quaternary care hospital in New York City. All adult patients who underwent CRS and HIPEC between January 1, 2007 and December 31, 2012 and admitted to ICU postoperatively were studied. 51 patients came to the ICU postoperatively out of 170 who underwent CRS and HIPEC therapy during the study
