Eurytrematosis: An emerging and neglected disease in South Brazil

Claiton I Schwartz, Neuber J Lucca, Aleksandro S da Silva, Piotr Baska, Gustavo Bonetto, Mateus E Gabriel, Fábio Centofanti, Ricardo E Mendes

Abstract

The trematodes of the genus *Eurytrema* are low pathogenic pancreatic parasites, but can be related to a decrease in cattle productive performance and eventually death. Parasitized animals develop chronic interstitial pancreatitis and may show a productive performance drop and emaciation. Human infection by *Eurytrema* sp. has already been reported in other countries as an incidental finding during autopsy or routine tests, but the parasite has not been found in humans in Brazil. However, it is possible that a large number of people could
