Top ten tips for perfect corona-2 prophylaxis

Mladen Knotek, Rafaela Novak, Alemka Jaklin-Kelez, Anna Mrzljak

TO THE EDITOR

A good effort to study post-exposure hydroxychloroquine (Quine) prophylaxis was recently published (1). Despite that it has decent statistical design, it has salient issues that need to be addressed to perfect the outcome of further Quine prophylaxis: **[1]** The primary outcome should involve viro-conversion from positive at entry (no one tested in this study) to negative on exit (only a few tests); **[2]** Primary outcome involves clinical symptoms

In nonsurgical patients at risk for VTE, **pharmaco-prophylaxis** is recommended over no prophylaxis, and mechanical prophylaxis should not be relied on unless there are extenuating circumstances regarding patient preference. Mechanical prophylaxis is a good choice in this population if bleeding risk or other contraindications to heparinoids exist.
