Primary care and mental health in academic settings: Where do we go from here?

Moise *et al* primary care and mental health recs

Abstract

Primary care has been dubbed the “de facto” mental health system of the United States since the 1970s. Since then, various forms of mental health delivery models for primary care have proven effective in improving patient outcomes and satisfaction and reducing costs. Despite increases in collaborative care implementation and reimbursement, prevalence rates of major depression in the US remain unchanged while anxiety and suicide rates continue to climb. Meanwhile, primary care task forces in countries like the United Kingdom and Canada are recommending against depression screening in primary care altogether, citing lack of trials demonstrating improved outcomes in

A Solution in

Medicine's unwillingness to acknowledge the influence of behavior on health is leading to suboptimal outcomes in our patients and costing the **healthcare** system billions of dollars every year. Recent studies also reveal just how intertwined diseases of the mind and the body are. For example: 1. The Journal of Clinical Psychiatry reports that the incremental economic burden of individuals with depression has increased 21.5 percent, from \$173.2 billion in 2005 to \$210.5 billion in 2010 with most of the cost result...
