Effects of music and music therapy on mood in neurological patients

Alfredo Raglio, Lapo Attardo, Giulia Gontero, Silvia Rollino, Elisabetta Groppo, Enrico Granieri

Abstract

Mood disorder and depressive syndromes represent a common comorbid condition in neurological disorders with a prevalence rate that ranges between 20 and 50% of patients with stroke, epilepsy, multiple sclerosis, and Parkinson's disease. Notwithstanding, these conditions are often under-diagnosed and under-treated in the clinical practice and negatively affect the functional recovery, the adherence to treatment, the quality of life, and even the mortality risk. In addition, a bidirectional association between depression
