Obstetrical and gynecologic challenges in the liver transplant patient

Ziogas IA *et al.* Obstetrical and gynecologic challenges in LT

Ioannis A Ziogas, Muhammad H Hayat, Georgios Tsoulfas

Abstract

An increasing number of childbearing agewomen undergo liver transplantation (LT) in the United States. Transplantation in this patient subgroup poses a significant challenge regarding the plans for future fertility, particularly in terms of immunosuppression and optimal timing of conception. Intrapartum LT is only rarely performed as the outcome is commonly dismal for the mother or more commonly for the fetus. On the other hand, the outcomes of pregnancy in LT recipients are favorable, and children born to LT
