Acute bacterial sternoclavicular osteomyelitis in a long-term renal transplant recipient

Evangelia Dounousi, Anila Duni, Sofia Xiromeriti, Charalambos Pappas, Kostas C Siamopoulos

# **Abstract**

Kidney transplantation is the treatment of choice for a significant number of patients with end-stage renal disease. Although immunosuppression therapy improves graft and patient's survival, it is a major risk factor for infection following kidney transplantation altering clinical manifestations of the infectious diseases and complicating both the diagnosis and management of
