Face transplantation: Anesthetic challenges

Aparna Dalal

Abstract

Face transplantation is a complex vascular composite allotransplantation (VCA) surgery. It involves multiple types of tissue, such as bone, muscles, blood vessels, nerves to be transferred from the donor to the recipient as one unit. VCAs were added to the definition of organs covered by the OPTN Final Rule and National Organ Transplant Act. Prior to harvest of the face from the donor, a tracheostomy is usually
