Helicobacter pylori and Cancer - National Cancer Institute

https://www.cancer.gov/about-cancer/causes... •

Epidemiologic studies have shown that individuals infected with H. pylori have an increased risk of gastric adenocarcinoma (1,2,8-12). The risk increase appears to be restricted to non-cardia gastric cancer. For example, a 2001 combined analysis of 12 case-control studies of H. pylori and gastric cancer estimated that the risk of non-cardia gastric cancer was nearly six times higher for H ...

Jan 22, 2021 · What is HPV (human papillomavirus)? HPV is a group of more than 200 related viruses, some of which are spread through vaginal, anal, or oral sex. Sexually transmitted HPV types fall into two groups, low risk and high risk. Low-risk HPVs mostly cause no disease. However, a few low-risk HPV types can cause warts on or around the genitals, anus, mouth, or throat.

Jul 17, 2021 - Objective The human papillomavirus (HPV) is implicated in the pathogenesis of several cancers among humans. The role of HPV as one of the etiological agents in esophageal carcinogenesis is partially unknown. We assessed whether the available evidence supports the association of HPV with risk and prognosis in patients with esophageal squamous cell carcinomas (ESCCs). Design For this ...
