Basic Study

Structural and nucleic acid binding properties of Hepatitis Delta virus small antigen

Carolina Alves, Hong Cheng, João Paulo Tavanetz, Ana Casaca, Severin Gudima, Heinrich Roder, Celso Cunha

Abstract

AIM: In order to further characterize the structure and nucleic acid binding properties of the 195 amino acid small delta antigen, S-HDAg, a study was made of a truncated form of S-HDAg, comprising amino acids 61-195 (Δ 60HDAg), thus lacking the domain considered necessary for dimerization
