Epidemiology, clinical characteristics, and management of chronic kidney disease in HIV-infected patients

Minoru Ando, Naoki Yanagisawa

#### Abstract

Antiretroviral therapy (ART) has markedly reduced acquired immune deficiency syndrome (AIDS)-related deaths and opportunistic infectious diseases. This has resulted in prolonged survival of individuals infected with the human immunodeficiency virus (HIV). However, this improvement in survival has been accompanied by an increase in the incidence of chronic kidney disease (CKD) and end-stage renal disease (ESRD). CKD is now
