Observational Study
10 Chronic kidney disease in children and adolescents in Brunei Darussalam

Shi Ying Tan, Lin Naing, Aye Han, Muhammad Abdul Mabood Khalil, Vui Heng Chong, Jackson Tan

Abstract
AIM: To determine epidemiology of Bruneian paediatric CKD patients and factors that affect growth and progression of disease.

METHODS: A cross-sectional study conducted on all children below 18 years old who were diagnosed with CKD over a ten year period (2004 to 2013). The reference population was all children (< 18 years old) suffering from CKD and attending the tertiary paediatric nephrology clinic in Brunei Darussalam. Demographic (current age, age of diagnosis, gender, ethnicity), anthropometric (weight and height), diagnosis, laboratory data (serum creatinine and haemoglobin, urinalysis) and blood pressure were extracted from the patients' clinical case notes and recorded using a data collection form.
