Renal biopsy: Still a landmark for the nephrologist

Luca Visconti, Valeria Cernaro, Carlo Alberto Ricciardi, Viviana Lacava, Vincenzo Pellicanò, Antonio Lacquaniti, Michele Buemi, Domenico Santoro

Abstract

Renal biopsy was performed for the first time more than one century ago, but its clinical use was routinely introduced in the 1950s. It is still an essential tool for diagnosis and choice of treatment of several primary or secondary kidney diseases. Moreover, it may help to know the expected time of end stage renal disease. The indications are represented by nephritic and/or nephrotic syndrome and rapidly progressive acute renal failure of
