Observational Study

Prevalence of risk factors for cardiovascular and kidney disease in Brazilian healthy preschool children

Adriana Cândida da Silva, Marcelo de Sousa Tavares, Maria Goretti Moreira Guimarães Penido

Abstract

AIM: To investigate the prevalence of nutritional parameters of risk for cardiovascular (CVD) and kidney diseases (KD) in healthy preschool children.

METHODS: This is an observational cross-sectional study with 60 healthy children, of both genders, aged two to six years old and 56 mothers, in Belo Horizonte, Minas Gerais, Brazil. Preschool children and their families with regular activities at public schools were invited to participate in the study. The following characteristics were assessed: socio-demographic conditions, clinical health, anthropometric, biochemical, lifestyle and data on food consumption. The 56 healthy children were divided into two groups, overweight (C1) and non-
