Role of imaging in the evaluation of renal dysfunction in heart failure patients

Grande D *et al.* Renal imaging in heart failure

Dario Grande, Paola Terlizzese, Massimo Iacoviello

Abstract

Heart failure and kidney disease share common pathophysiological pathways which can lead to mutual dysfunction, known as cardiorenal syndrome. In heart failure patients, renal impairment is related to hemodynamic and non-hemodynamic factors. Both decreased renal blood flow and renal venous congestion due to heart failure could lead to impaired renal function. Kidney disease and worsening renal function are independently associated with poor prognosis in heart failure patients, both in acute and chronic clinical
