Accurate diagnosis of ³⁶ myalgic encephalomyelitis and chronic fatigue syndrome based upon objective test methods for characteristic symptoms

Frank NM Twisk

Abstract

Although Myalgic Encephalomyelitis (ME) and Chronic Fatigue Syndrome (CFS) are considered to be synonymous, the definitional criteria for ME and CFS define two distinct, partially overlapping, clinical entities. ME, whether defined by the original criteria or by the recently proposed criteria, is not equivalent to CFS, let alone a severe variant of incapacitating chronic fatigue. Distinctive features of ME are: muscle weakness and easy muscle fatigability, cognitive impairment, circulatory deficits, a marked variability of the symptoms in presence and severity, but above all, post-exertional "malaise": a (delayed) prolonged aggravation of symptoms after a
