"How many times must a man look up before he can really see the sky?"

Rheumatic cardiovascular disease in the era of multimodality imaging

Sophie I Mavrogeni, George Markousis-Mavrogenis, David Heuteman, Kees van Wijk, Hans J Reiber, Genovefa Kolovou

Abstract

Cardiovascular involvement in rheumatic diseases (RD) is the result of ²various pathophysiologic mechanisms including inflammation, accelerated atherosclerosis, myocardial ischemia, due to micro- or macro-vascular lesions and fibrosis. Noninvasive cardiovascular imaging, including echocardiography, nuclear techniques, ¹⁶cardiovascular computed tomography and cardiovascular magnetic resonance, represents the main diagnostic tool for early, non-invasive diagnosis of heart disease
