Vascular targeted photochemotherapy using padoporfin and padeliporfin <sup>12</sup> as a method of the focal treatment of localised prostate cancer - clinician's insight

Andrzej M Bugaj

#### Abstract

Vascular targeted photochemotherapy (VTP) holds promise as a novel strategy of the focal treatment of LPCa. It is convenient to perform, minimally invasive and can be conducted in ambulatory conditions. In this review, methodologic aspects of padoporfin- and padeliporfin-mediated VTP and its clinical application in focal treatment of localised prostate cancer (LPCa) as well as future perspective of this method were presented. Physicochemical and pharmacokinetic parameters of
