5 **Cutaneous perivascular epithelioid cell tumors: A review on an infrequent neoplasm**

Mar Llamas-Velasco, Luis Requena, Thomas Mentzel

## Abstract

1 Cutaneous perivascular epithelioid cell tumors (PEComas) are a family of mesenchymal tumors with shared microscopic and immunohistochemical properties: they exhibit BOTH smooth muscle cell and melanocytic differentiation. 9 Non-neoplastic counterpart of PEComa cells are unknown, as well as the relationship between extracutaneous PEComas and primary cutaneous PEComas. We will review the clinical setting, histopathologic features, chromosomal abnormalities, differential diagnosis and treatment options for cutaneous PEComas.

7 KEY WORDS: PEComa, skin, cutaneous perivascular Epithelioid Cell tumors, clear cell myomelanocytic tumor.
