Modified skin bridge technique for ilio-inguinal lymph node dissection: A forgotten technique revisited

Mukur D Ray, Pankaj K Garg, Ashish Jakhetiya, Sunil Kumar, Durgatosh Pandey

Abstract

Ilio-inguinal lymph node dissection (IILD) is a commonly performed surgical procedure for a number of malignant conditions involving mainly the male and female genitalia, and skin; however the perioperative morbidity of IILD, due to high frequency of flap necrosis, wound infection and seroma formation, has always been a major concern for the surgeons. The aim of the paper is to propose a modified skin bridge technique of IILD using two parallel curvilinear incisions to minimize perioperative morbidity, classically associated with the
