

Animal care and use statement: All rabbits were acclimatized for one week to adapt to the new environment, food and water. Daily evaluation of their health status was performed for one week to make sure their clinically healthy prior to the experiments. The animals were housed individually in cages under set temperature ($22\pm 1^{\circ}\text{C}$) and a relative humidity ($45\pm 10\%$) with a 12 h light/12 h dark cycle. Each animal was free to access to standard diet for rabbits and fresh water.
