Title: The Pharmacological Evaluation of NSAID-Induced Gastropathy as a “Translatable” Model of Referred Visceral Hypersensitivity

Animal Care and Use Statement: male CD-1 mice (Harlan Laboratories, Indianapolis, IN) weighing 20-25 g were housed on cob bedding (five/cage) in a climate-controlled room and maintained on a 12- hour light/dark cycle with free access to food and water. Animals were acclimated to the Purdue Pharma L.P. animal facility for one week prior to testing. The minimum number of animals were used for these studies so that no undue pain was evoked.
