

## Biostatistics statement

Title: Clinical Observation on Acupuncture combined with Neuromuscular Joint Facilitation in Treatment Hemiplegic Shoulder Pain

Case source: From January 2016 to February 2017, 40 patients with HSP were collected from the Acupuncture and Rehabilitation Department and the Neurology Department of Jiangsu Provincial Hospital of Traditional Chinese Medicine.

Statistical analysis: Statistical analysis was performed on relevant clinical data with IBM SPSS Statistics 20.0. The measurement data were consistent with the normal distribution using the T-Test. The differences between the groups were compared with the paired T-Test. The differences between the groups were compared using the independent T-Test. Square test. Non-parametric tests are used that do not conform to the normal distribution. They were statistically different at  $p < 0.05$ .
