Biostatistics statement:

The obtained data are presented as mean \pm standard deviation (SD) values with minimum, maximum and median values indicated. The distributions of the analysed factors were verified using Shapiro-Wilk test. The correlations between analysed factors were verified using Spearman rank correlation coefficient (applied due to nonparametric distribution). The differences between groups were analysed using U Mann-Whitney test (applied due to nonparametric distribution). The level of significance $p \leq 0.05$ was accepted. The statistical analysis was carried out using Statistica software version 8.0 (StatSoft Inc., Tulsa, OK, USA).
