

‘Histopathological evaluation of long-term tenofovir disoproxil fumarate treatment in patients with HBeAg-negative chronic hepatitis B ’ named study is statistically reviewed by a specialist of biostatistic. The data are presented as the mean, median, standard deviation (SD) and percentage. All analysis was performed using IBM SPSS Statistics, V.20.0 (IBM Corp., Armonk, NY). The Kolmogorov–Smirnov test was used to assess normality of quantitative variables. Differences in the variables pre and post treatment were analysed by the Wilcoxon test within groups. All tests were two-tailed, and $p < 0.05$ was considered to be statistically significant.
