

## **Efficacy of Texture Analysis of Pre-operative MRI in Predicting Microvascular Invasion in Hepatocellular Carcinoma**

Informed consent: This study was conducted using data collected from an institutional board approved standing database (National Healthcare Group Domain Specific Review Board, Ref no: 2018/00054). Informed consent was hence not obtained from the included patients. Collected data were de-identified and were only accessible to members of the study team with no subsequent patient contact for purposes of data collection. No attempts were made by the study team to access the medical records of patients via the national electronic health record system.
