

Dear Editor-In-Chief

World Journal of Clinical cases

Dear Sir/ma

Original article: **Cover Letter on the manuscript : Completion of 6-month Isoniazid preventive treatment among Under Six Child contacts of adults with smear positive pulmonary Tuberculosis in Lagos, Nigeria**

The letter is to state that the above study reviewed INH register of patient placed on INH across selected facilities and did not involve any human subject interaction. Informed consent was taken from mothers of children under-six whose data was extracted from the register. All data was anonymized and de-identified to preserve client privacy and confidentiality. In line with retrospective nature of the study, no ethical approval was required.
