this article is well written, highly original. stated that reviewer stated that this is a nice study that reflects daily practice in HCC souveillance in Australia. The number of patients is remarkable. This paper showed a fragile subgroup of patients in which the surveillance shown to be weaker, thus stressing a problem. At regards it could be nice to report in the study if there are any solutions to suggest. Limitation are clear and related on retrospective design of this monocentric study (3) Format: There are 3 tables and 2 figure. (4) References: A total of 33 references are cited, including 21 references published in the last 4 years. (5) Self-cited references: There are no self-cited references. (6) References recommendations: No recommendation. 2 Language evaluation: Classification: Grade A; Grade B 3 Academic norms and rules: The authors provided the Biostatistics Review Certificate, english language certificate, and the Institutional Review Board Approval Form. 4 Supplementary comments: This is an invited manuscript. Ethics committee approval document was submitted, but no information about ethics committee approval date/number was given in the text of the article. Many studies have been published in the literature on Hepatocellular Carcinoma Surveillance. In addition, annual epidemiological studies covering the whole world on the incidence of Hepatocellular Carcinoma are published. Similar studies have also been published by the WJG series. Re-Review: No- required. Recommendation: It would be appropriate for such a comprehensive study to be reviewed by

14	study that outlines the most innovative and important arguments	D.C.
14	and core contents of the paper and will serve to effectively attract	[Y]
	readers.	
	The 'INTRODUCTION' section clearly describes the relevant	
	background information for the study. Only the most relevant and	
	current (within the past 5 years) literature is cited, with the

	by the author(s). When weaknesses of previous studies are	
	described in the text to highlight the innovations related to the	
	current study, the information is presented carefully.	
	The 'MATERIALS AND METHODS' section clearly and accurately	
	describes all materials and methods used to obtain the data	
16	presented in the article and is adequate for a reader to repeat the	[Y]
	study.	
	The 'RESULTS' section concisely describes the observational and	
	experimental results. Representative data and data that have	
	scientific significance are emphasized. Data is presented in either	
17	the text, a table or figure (<i>i.e.</i> , chart, diagram, graph or image), but is	[Y]
	not repeated among each. Information presented in the tables and

Statistical symbols are accurate. Statistical significance is expressed as "P < 0.05, "P < 0.01 (P > 0.05 usually does not need to be denoted). If there are other series of P values, "P < 0.05 and "P < 0.01 are used, and a third series of P values is expressed as "P < 0.05 and "P < 0.01. Statistical data is expressed as mean ± SD or mean ± SE. The 'DISCUSSION' section (1) describes the main purpose and hypothesis of the study; (2) summarizes the most important results; (3) illustrates and explains the results (but does not simply repeat the data) and draws conclusions or inferences based on the results; (4) points out the limitations of the study and their impact on the results, as well as proposes further advice on future research topic(s) or direction(s); and (5) describes the theoretical significance and practical value of the findings. The 'ACKNOWLEDGEMENTS' section expresses gratitude to any individuals or organizations for technical support (i.e., providing instrumentation, equipment or experimental materials, and/or assistance in experimental work), non-technical services (i.e., useful inspiration, suggestions, guidance, or review), and/or any other auxiliary work. The 'ARTICLE HIGHLIGHTS' section provides comments for original articles in accordance with the specified format. The 'REFERENCES' section lists the references in the Vancouver style. This style uses Arabic numeral in-text citations based on the order of the first appearance of a source in the text. For citations where the author's name is indicated in the text, a superscript number should be placed following the name (i.e., "Pang et al"). For citations where no author is indicated, a superscript number should be placed at the end of the sentence. Respective examples are: "Ma ^[1]
