STANFORD UNIVERSITY SCHOOL OF MEDICINE
Office of Medical Student Research and Scholarship

Dear Dr. Rubin:

Congratulations on your Medical Scholars research proposal being approved for funding! This letter will serve as your grant acceptance certificate and your agreement to fulfill the student responsibilities and policies of the Medical Scholars Program.

Project Title: Disease exacerbation is common in inflammatory bowel disease patients treated with immune checkpoint inhibitors for malignancy

Funding for your project will be disbursed by Financial Aid during the approved quarters. For students not on financial aid, MedScholars funding is generally applied towards tuition, as stipends are taxable. MedScholars awards are for student support, not for research supplies or equipment. Please refer to the MedScholars website for funding levels.

1. MedScholars awards are to support the research project, not the individual student. If you need to change the nature, scope or direction of the project, the MedScholars Program Administrator must be notified so that a petition for change can be submitted to the Committee. If a significant problem, other than change in project, occurs such that you cannot meet expectations, you should inform the MedScholars Program Administrator and be prepared to withdraw from the program and return any money that was disbursed.
2. Work on your project – the one that has been approved - during the quarter(s) in which you are in receipt of funding and academic credit. Students may continue work on their project when not in receipt of pay or academic credit.

If you have any questions, please drop-by and see me in MSOB Suite 100, call me at 650-723-0355, or send an email to nmarino1@stanford.edu

Best Wishes,
Office of Medical Student Research and Scholarship
