COMMENTS

COMMENTS TO AUTHORS:

An english spellcheck would be indicated to prepare it for publication. That is no big issue and could be done by the authors or colleagues of them. But there is a significant shortcoming with the method of discussion. Actually, there is much literature and sound data that should be discussed in such a paper but are totally missing. The author mixed phrases of some authors but not coming up with a connected argumentation or conclusion that bases on the literature or his result.

COMMENTS

COMMENTS TO AUTHORS:

Dr. Landi provided an interesting editorials. The author used “dynamic neutralization” and “peduncular screws” in the manuscript. In general, “dynamic stabilization” and “pedicle screws” are more common in the majority of literatures. I recommend the latter terminologies. Additionally, a few grammar and syntax errors to be corrected.

COMMENTS

COMMENTS TO AUTHORS:

This article is a nice review of available dynamic fixation devices. 1.I suggest grammatical editing of the manuscript. 2. All abbreviations should be elaborated at first place.

COMMENTS

COMMENTS TO AUTHORS:

Is the author to oppose or support the motion preservation surgery? The title of paper and the expression meaning of the last paragraph is contradictory. Although there still are some defects, a large number of studies have shown that motion preservation surgery can obtain very good clinical efficacy. I think that the manuscript can not be published.
