COMMENTS TO AUTHORS

The authors describe an unusual case of a teratoma in an adult. There needs to be significant proofreading for grammatical errors. In addition, the authors did not perform a needle biopsy – can they explain why, and also explain the role for needle biopsy in the diagnosis and differentiation between teratoma and other possible neck masses?

COMMENTS TO AUTHORS

1. English needs proofreading. 2. Page 3, line 4: Proper operation day should not be indicated in the article. 3. References should include more recent literature. 4. Figure 2: Put the alphabet (A, B, C, D) in each picture.

COMMENTS TO AUTHORS

I read the manuscript named “ Cystic benign teratoma of the neck in adult ” that have been submitted to your World Journal of Clinical Cases and my recommendations are as follows; This manuscript is well written and documented. Teratomas should be considered in the differential diagnosis of cervical masses. This article is remarkable with this aspect. I think that this manuscript is suitable and worth to be published in World Journal of Clinical Cases.
